# The Purpose Of The Energy Audit

To be able to establish a client is going to benefit from a green ICT project both financially and for the environment (by reducing their carbon footprint)

One Planet Computing will conduct an initial audit to make of its suitability. The audit will comprise on one day's on-site visit in order to meet the client, survey the systems and processes in place, and to gauge the client's expectations from such a project.

Once the initial audit has taken place One Planet Computing will produce a report based in the information given as to where the potential savings will be financially and with regards to reducing the client's carbon footprint.

# Server Room

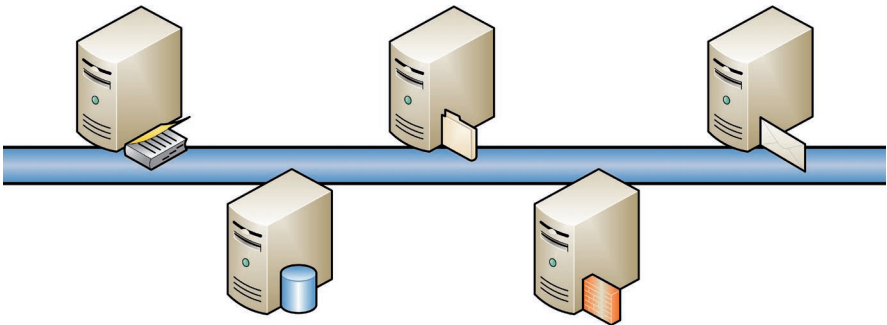

The audit will highlight:

Which servers have reached end-of-life and should be decommissioned, recycled or virtualised.

Power usage information for up to five different types of servers in your organisation

Which servers are candidates for virtualisation, data centre hosting or moving into the cloud.

A review of the current profile for power usage, air conditioning and the general layout in regards to airflow and cooling.

# Office Workspace

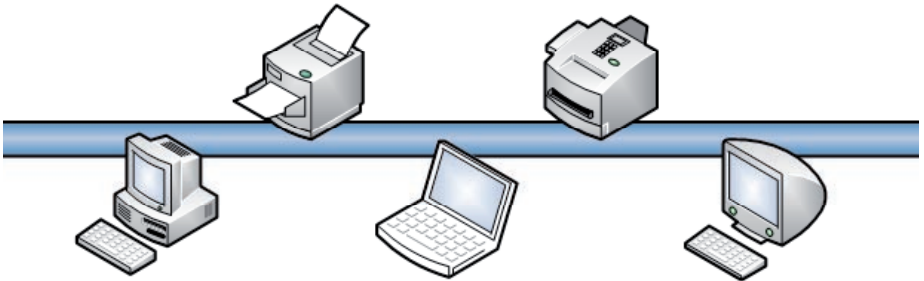

The audit will highlight:

Workstation power consumption, monitor power consumption and printer/fax/copier power consumption

The ratio of power used/wasted for up to five different types of user and computer in your organisation

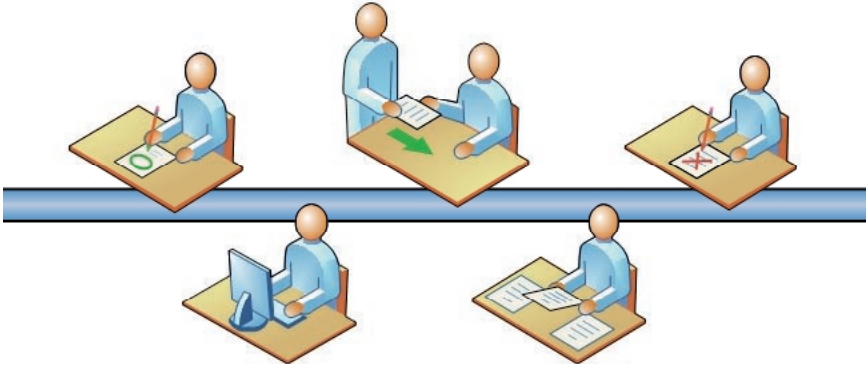

Which types of roles and devices are candidates for desktop virtualisation and the anticipated savings that could be made each year.

Guidance on reducing the power usage and environmental impact of printers and wireless access points.

# Employees & Working Habits

The audit will highlight:

Recommendations for office workers and the use of office equipment

Recommendations for remote workers and the use of remote working technologies

Recommendations about the use of newer conference calling and video conferencing technologies.

The use of timer switches, energy saving devices and the appointment of a "Green officer".
